

MoodCircle Mobile App

WireFraming - Design Document

Key Features

- *Conduct basic user research to define user needs*
- *Create user personas and user flows*
- *Design low-fidelity wireframes using Figma or Adobe XD*
- *Document the design thinking process*

User Research

1. Introduction

The user research was conducted to understand the emotional and mental health needs of potential users for the MoodCircle application. The main focus was on students and young adults who experience stress, mood changes, and lack of emotional awareness in daily life.

2. Target Users

The primary target users identified are:

- *College students*
- *School students (higher secondary)*
- *Young adults (18–25 age group)*

These users are more likely to face:

- *Academic pressure*
- *Emotional stress*
- *Anxiety and overthinking*
- *Irregular mental health patterns*

3. User Problems Identified

From basic research, the following problems were observed:

- Users are unable to track their daily emotions effectively*
- There is no simple and engaging mood tracking system*
- Users often ignore mental health due to busy schedules*
- Lack of motivation to maintain journaling habits*
- No easy platform for self-reflection and emotional expression*
- Stress management tools are not easily accessible or user-friendly*

4. User Needs

Based on the problems identified, the following user needs were defined:

4.1 Emotional Tracking

Users need a simple way to record their daily mood using easy visual elements like emojis.

4.2 Self-Expression Tools

Users need a private space to write their thoughts, feelings, and experiences without judgment.

4.3 Motivation and Goal Setting

Users need a feature to set personal goals and stay motivated towards mental well-being improvement.

4.4 Energy Monitoring

Users need a way to understand their daily energy levels to improve productivity and balance lifestyle.

4.5 Relaxation Support

Users need guided tools such as breathing exercises and meditation to reduce stress and anxiety.

4.6 Simple and User-Friendly Design

Users prefer a clean, minimal, and easy-to-use interface without complexity or confusion.

User Persona

1. Persona Overview

This persona represents a typical user of the MoodCircle mental wellness application.

2. Persona Details

Name: Sadhana

Age: 19

Occupation: College Student

Location: India

3. Background

Sadhana is a college student who manages academic pressure, exams, and personal life. She often feels stressed and experiences mood swings but does not have a structured way to track or understand her emotions.

4. Goals

- *To manage stress effectively*
- *To improve emotional awareness*
- *To maintain a positive mindset*
- *To track daily mood and energy levels*
- *To build better self-discipline and focus*

5. Problems

- *Gets stressed due to studies and exams*
- *Finds it difficult to express emotions*
- *No habit of journaling thoughts*
- *Lacks motivation for self-care routines*
- *Needs simple mental health support tools*

6. Needs

- *Simple mood tracking system*
- *Journaling feature for thoughts*
- *Relaxation tools like meditation*

User Flow

The user flow describes the step-by-step journey of the user inside the MoodCircle application.

1. Splash Screen

App logo appears (MoodCircle)

2. Login / Signup

User creates account or logs in

3. Onboarding Screens

Awareness of app

Journaling introduction

Expert support introduction

4. Mood Selection Screen

User selects mood using 9 emojis

5. Energy Level Screen

User selects energy level using slider/circle

6. Goal Setting Screen

User selects personal mental wellness goals

● 7. Thought / Journal Screen

User writes daily thoughts

● 8. Dashboard

Shows mood summary and insights

● 9. Profile Setup

User enters name and personal info

● 10. History Screen

Shows past mood tracking records

● 11. Journal Screen

Displays all saved entries

● 12. Meditation Screen

Breathing exercises and relaxation tools

Low-Fidelity Wireframes (Figma)

Low-fidelity wireframes were designed using Figma to represent the basic structure and layout of the MoodCircle mobile application. The focus was on simplicity, user flow, and functionality rather than visual styling.

The wireframes include:

Splash Screen (App title and logo)

Login / Signup Page

Onboarding Screens (App introduction)

Mood Selection Screen (9 emoji-based input)

Energy Level Screen (slider/circle input)

Goal Setting Screen (user objectives)

Thought / Journal Entry Screen (text input)

Dashboard (main overview screen)

Profile Setup Page (user identity)

History Screen (past mood tracking)

Journal Screen (saved entries)

Meditation Screen (breathing exercises)

These wireframes help in understanding how users will navigate through the application in a simple and structured way.

Design Thinking Process

Empathize: Understand user mental health needs

Define: Identify need for mood tracking solution

Ideate: Plan features like mood, journaling, meditation

Prototype: Create wireframes using Figma

Test: Validate user flow and usability
